projects

I have completed various projects during my time at highschool and university, because either I wanted to learn a programming langauge in the context of a project or for the simple enjoyment of writing programs.

- TrendChattr: EmberJS, jQuery, Socket.IO, Bootstrap, Redis, MongoDB, TwitterAPI, Git A startup idea my friend and I had, for a mainstream chat room client, a more polished and accessible version of IRC. Uses a transient data model which pushes to all Socket.IO connections, the chat rooms are based off of the trending topics on Twitter.

 View TrendChatt
- **GymTracker:** PHP, MySQL, CSS3, HTML5, jQuery, AJAX Tracks user progress, tells the lifter when they are plateauing, draws progress graphs.
- MovieThoughts: NodeJS, EJS, MySQL, AJAX, HTML5, CSS3, Bootstrap Stores my thoughts and theories on my movie catalog, pulls data from IMDB's API.

I have done plenty more projects, some involve **multithreading**, **math**, **serialization**, **data structures**.
